

UV-C Dosimeters can be used with all of Plasma Clean's standalone, indoor UVGI products. These subtle indicators will accurately display the effectiveness of your disinfection processes, allowing you to check if room surfaces have received enough germicidal irradiation.

In a post-Covid world, these are an ideal method to document due diligence within the commercial, education, healthcare and dental sectors.

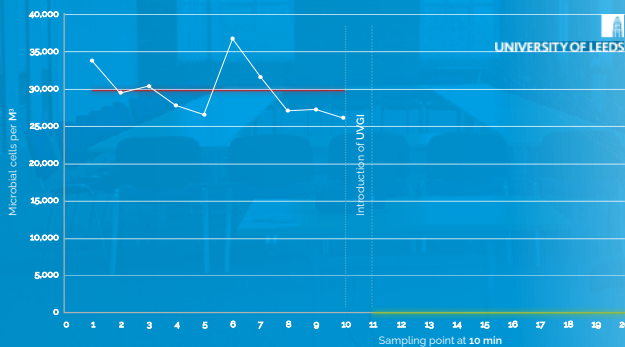

UV-C Dosimeters work hand-in-hand with Plasma Clean's standalone UVGI products, such as MobiKlean and AirKlean.

Benefits

- Safely and precisely measure UV-C disinfection in treated areas
- Helps ensure thorough Due Diligence Checks in any rooms being disinfected
- For use with any of Plasma Clean's standalone UVGI products

99+% DISINFECTION RATE

UV-C light at 254nm is known as 'germicidal irradiation' due to its lethal effect on microorganisms. Independent testing conducted at the **University of Leeds**, showed a reduction of over **99% of viruses, bacteria, spores and fungi** when exposed to our UVGI products.
