

## A consultant-led project for with HMA Ventilation

The college in Beverley, Yorkshire required Odour Control installation within reduced plant space

### Issue

East Riding College is home to 1600 students, as well as a further 8000 part-time. Despite this, their kitchen facilities were somewhat limited with regards to space. Plasma Clean were tasked with eliminating Grease and Odour Control, whilst working within the original, reduced kitchen space.

### Solution

Plasma Clean supplied canopy mounted UV-c (Techniclean) units that were incorporated into the canopy. The Techniclean Canopy Mount system breaks down kitchen smells and grease using photolysis and ozonolysis. It combines high-intensity UV-c light with ozone technology to destroy grease and gassy smells.

### Result

Successful installation with the contractor and our partner, the UVC system continues to treat the kitchen smells.
