

## A 5\* hotel with an award winning restaurant, situated in the South Downs

100% odour control performance requirement due to proximity of kitchen extraction to guest bedrooms

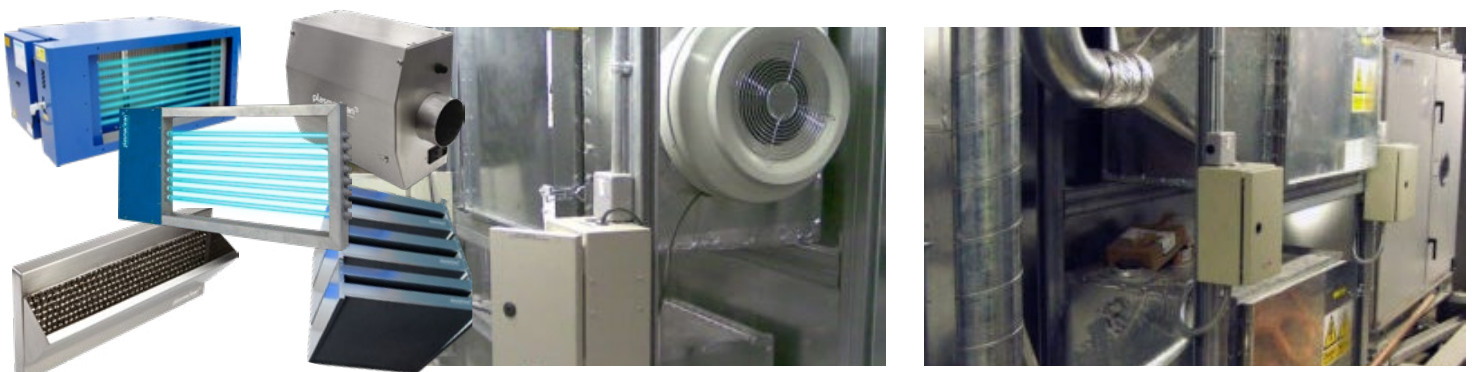

### Issue

The exclusive 5 star South Lodge Hotel in Horsham, West Sussex, was undergoing a major refurbishment, and the award winning Camellia restaurant was central to the project. Due to the proximity of the restaurant's kitchen to the guest bedrooms, we were instructed to implement an all-encompassing odour control solution.

### Solution

Plasma Clean implemented their "Eliminair" system. This comprises of Coil Filters, extracting 95% of grease, within in the kitchen canopies, as well as installation of the UV ready Techniclean Canopy Mount. Xtract 2100 units were included for initial Odour Control, before followed by Electrostatix ESP unit and finished off with our Activated Carbon.

### Result

100% odour control solution with a 10% saving on installation, 50% saving on capital costs and 60% saving on running and maintenance.

*"With the Eliminair system installed, there are categorically no odours emitted from the kitchen extraction system"*  
- Rupert Spurgeon, General Manager
